

## Digital code output type

### Description

FUJI AC series rotary switches offer a wide choice of output codes. They feature sliding Au-flashed contacts for high contact reliability. Inhibitor and parity check circuits guard against switch malfunctions caused by error signals. With only seven connections to make, these switches are an economical solution to multiposition switching needs.

### Features

- Au-flashed contacts for high contact reliability.

- The protection of operator section meets the IP65 (IEC), so these switches can be used in oil-splash environments, such as on machine tool control panels.
- A wide choice of output codes fits a broad range of applications. Available step angles are 15, 30, and 360°/26 (13.85°). Real binary code, complementary binary code, and real gray code are available.
- Switches are available with connectors or with lock rings for easy handling.
- Stopper screw positions are user selectable.

### Ratings

Volts	Operational current (A) (resistive load)
50V AC	0.05
5V AC	0.5
25V DC	0.05
5V DC	0.25

### Performance

Rated insulation voltage	60V
Operating temperature	-20 to +70°C
Humidity	45 to 85%RH (non condensation)
Service life	Mechanical: 50,000 operations Electrical: 50,000 operations
Dielectric strength	Between terminals: 250V AC, 1 minute Between terminals and ground: 1500V AC, 1 minute
Insulation resistance	Between terminals: 500MΩ or more Between terminals and ground: 5,000MΩ or more
Degree of protection (operator section)	IP65 (IEC)

### Type number nomenclature

**AC 09 – C Z 0 / 25 L1 E A01 / 0007**

#### Basic type

#### Mounting

09: M9 nut  
16: M16 adapter  
32: Adapter  
(32mm mounting pitch)

#### Type of code

R: Real binary code  
C: Complementary binary code  
G: Real gray code

#### Angle of step

Angle	Setting position
X: 30°	0 to 11
W: 360°/13 (27.69°)	0 to 12
Y: 15°	0 to 23
Z: 360°/26 (13.85°)	0 to 25

#### Start position

Available step angle
0 to 11: 30°
0 to 12: 360°/13 (27.69°)
0 to 23: 15°
0 to 25: 360°/26 (13.85°)

#### End position

Available step angle
0 to 11: 30°
0 to 12: 360°/13 (27.69°)
0 to 23: 15°
0 to 25: 360°/26 (13.85°)

#### With or without lock ring

Blank: Without lock ring  
0007: With lock ring  
0009: With adhesive lock ring

#### With or without connector

Blank: 8-terminal, without connector  
A01: 8-terminal, with right-angle connector  
A02: 8-terminal, with straight connector  
B00: 7-terminal, without connector  
B01: 7-terminal, with right-angle connector  
B02: 7-terminal, with straight connector

#### With or without stopper screw

Blank: With stopper screw  
E: Without stopper screw

#### Length of shaft (mm)

	AC09	AC16	AC32
L1:	16	—	14.5
L2:	18	—	16.5
L3:	20	—	18.5
L4:	22	19.5	20.5

Note: When shorter action than the maximum range of switch action is used, stopper screws are used. However, stopper screws are not used if the maximum action range is used when either 15° (symbol Y) or 360°/26 (symbol Z) is specified.

### Panel cutting

# Rotary Switches AC09, 16 and 32

## ■ Installation

### AC09

Pass the switch body through the hole from the back of the panel, and secure it by tightening the hexagonal nut with a flat washer and a toothed lock washer.

The recommended tightening torque for the hexagonal nut is 1.5 to 2N·m.

Insert the lock ring (ACX001) between the panel and the flat washer, and the adhesive lock ring (ACX001A) between the switch body and the panel.

### AC16

Pass the switch body with a bezel through the hole from the back of the panel, and secure it with a  $\phi 16$  mounting nut. The recommended tightening torque for the nut is 0.6 to 1N·m.

### AC32

Pass the switch body through the hole from the back of the panel, and secure it with two flat head screws from the face of the panel. The recommended tightening torque for the flat head screws is 0.3 to 0.5N·m.

## ■ Notes on use

### 1. Connecting wires

Note the following points when soldering:

- The power of the soldering iron must not be over 30W.
- Use solder with resin flux core.
- Complete soldering within 5 seconds if using a 30W soldering iron, or within 10 seconds if using a 20W soldering iron.

### 2. Note on the case linkage

### 4. Stopper screw positions

Insert stopper screws into the switch body holes marked with letters, as shown in the insertion example on the right. These tables below show that the start position stopper screw is inserted in the hole on the left of the position setting and the end positions stopper screw is inserted in the hole on the right.

### 3. Number of stopper screws shipped

- AC09 and AC32
  - Step angle: 30° (symbol X)  
Positions 0/11 (0 to 11): one screw. User-selectable start and stop positions: two screws (one for start position, one for end position).
  - Step angle: 15° (symbol Y)  
Positions 0/22 (0 to 22): one screw. User-selectable start and stop positions: two screws (one for start position, one for end position).
  - Step angle: 360°/26 (symbol Z)  
Positions 0/24 (0 to 24): one screw. User-selectable start and stop positions: two screws (one for start position, one for end position).
- AC16  
Customers can specify the stopper screw positions. The switch is then shipped with stopper screws already in the specified positions.

### 5. Installing a stopper screw

The maximum tightening torque for a stopper screw is 0.1N·m. Screw the stopper screw into position until it hits the body frame rib. Do not overtighten the screw.

Insertion example 1

• If symbol ① (step angle) is X-----type AC09-CX0/7L1:

Insert the start side stopper screw in hole A and the end side screw in hole Q.

• If symbol ① (step angle) is W-----type AC09-CW0/7L1:

Insert the start side stopper screw in hole A and the end side screw in hole Q.

• If symbol ① (step angle) is Y-----type AC09-CY0/7L1:

Insert the start side stopper screw in hole A and the end side screw in hole J.

Notes: 1. If the range of action is designated as 0/22 (0 to 22), insert a stopper screw into hole A only.  
2. If the range of action is designated as 0/23 (0 to 23), no stopper screws are inserted (symbol ④ is E).

• If symbol ① (step angle) is Z-----type AC09-CZ0/7L1:

Insert the start side stopper screw in hole A and the end side screw in hole J.

Notes: 1. If the range of action is designated as 0/24 (0 to 24), insert a stopper screw in hole A only.  
2. If the range of action is designated as 0/25 (0 to 25), no stopper screws are inserted (symbol ④ is E).

Insertion example 2
